

I-94 INTERCHANGE (EXIT 161) RECONSTRUCTION PROJECT

ISSUE 4: MARCH 2022

EXPLAINER VIDEO LAUNCHED FOR EXIT 161 PROJECT

To help explain a complicated process, NDDOT is excited to present a short explainer video clarifying how, when, and where the Exit 161 interchange reconstruction project will be. This video shows the current interchange and presents a computer-generated birds-eye view of the future interchange, a single-point urban interchange (SPUI) model.

As local residents and drivers become aware of the upcoming project at Exit 161 on I-94, it's important that everyone understands what to expect and what the impact will be. Watching and sharing this video will go a long way to easing the community's transition to construction in 2024.

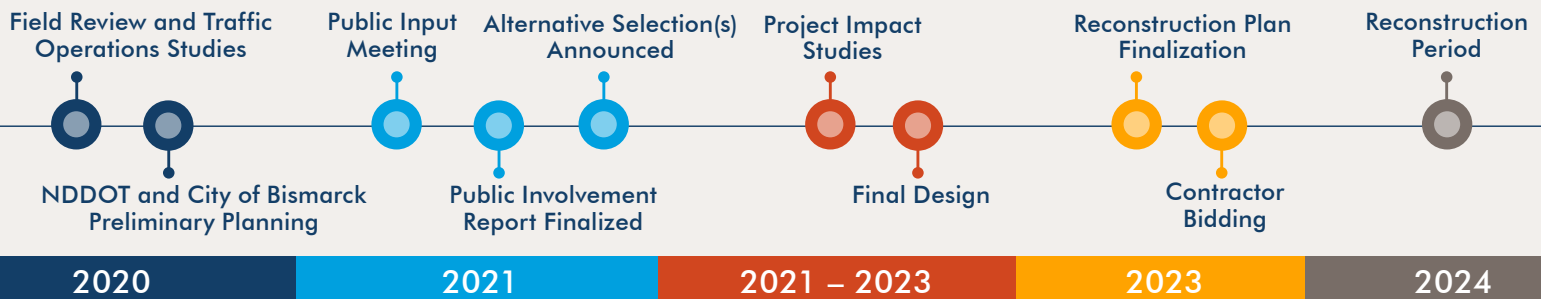

WILL I BE ABLE TO GET TO WORK ON TIME?

Big construction projects are often accompanied by big stresses. NDDOT is pleased to let the public know that the design of this project allows for the interchange to remain open throughout construction. If you have questions, please visit dot.nd.gov/exit161

The project is currently at the impact and design stage. The SPUI design modeled in the explainer video above was chosen as the final selection; now NDDOT is in the process of examining environmental and functional impacts of that design on its future location.

Tentative Project Timeline

Stay in touch with new developments on the I-94 project via this e-newsletter.
